SPORTSBEAMS

MOST ADVANCED LED LIGHTING IN THE WORLD

AUSTIN ★ TEXAS

Sportsbeams is a technology company, headquartered in Texas, that designs, engineers and manufactures the most advanced high-powered LED lights available on the market today.

With our exclusive line of single-glass optic LED fixtures, Sportsbeams lights up sporting venues, convention centers, and other facilities around the world with cutting-edge, patented technologies that are setting new standards in the field of LED lighting.

Calling upon decades of multiple Emmy Award-winning LED broadcasting engineering skills and world-class manufacturing experience, Sportsbeams was founded with the sole focus on pushing the boundaries LED lighting for the sports world and beyond.

Armed with multiple patents, our lights are completely unique in the industry, and leaps and bounds above the current status quo.

PATENTS & CERTIFICATIONS

Sportsbeams owns several patents and has dozens of certifications that illustrate just how truly advanced and reliable our technology is.

RESEARCH & DEVELOPMENT

Our passion and dedication for LED lighting shows in our extensive on-going research and development. We invest heavily into developing better and more innovative LED lighting that will continue to set new standards in the industry.

EMMY AWARDS

We're experts in professional LED lighting. As a matter of fact, the extensive technical achievements of SportsBeams' Founders include Emmy Awards for LED lighting technology that is "so innovative in nature that they materially have affected the ...recording of television."

MANUFACTURING FACILITY

Sportsbeams owns and operates our own manufacturing facility. We've been manufacturing for world-class companies for nearly two decades. No other sports lighting company has our breadth of manufacturing experience. And it shows in every light we make.

AUSTIN ★ TEXAS

GLASS SINGLE OPTIC LED

Glare Problems? Sportsbeams took a completely different design approach to address this issue. With over a decade of LED design experience in the movie industry, we knew that eliminating glare had to be a top priority.

Our design incorporates a broad, single glass lens to provide a much more uniform lumen density of 346 lumens/sq. in. This design distributes light evenly over 50,000x the area of each individual LED light source, maximizing both the emitting area of luminaries and uniformly redistributing the originating ultra-bright points of LEDs. This greatly reduces the amount of glare.

Getting bright light from a sports lighting fixture is relatively easy. Designing a fixture that utilizes that light without producing unacceptable levels of glare is physically impossible without incorporating our patented design. This design, in conjunction with numerous other features, makes Sportsbeams' fixtures the absolute best choice for all high-power lighting needs.

We bunch bare LEDs tightly together and don't cover them with small, plastic lenses.

We have developed the most advanced LED cooling technology on the market.

OTHER LED FIXTURES

Other light fixtures cannot control the heat. So they have to separate the LEDs.

When LEDs are separated, their light can only be controlled by individual plastic lenses.

Light is forced through plastic that traps heat from the LEDs while also warping and cracking in sunlight.

Glare is the inevitable result of light and dark spots due to LED separation and forcing too much light through warped and cracked plastic lenses.

KEEPING IT COOL

Sportbeams FIELD LED 800 and the CHROMABEAMS LED 900 are powerful lights. With active cooling, we were able to increase the lifespan of the fixtures, significantly reduce weight, allow the fixture to be mounted at any angle, and increase its ambient temperature range. Using military grade fans that are tested to last over 490,000 hours in any weather conditions, our intelligent cooling system is rugged, reliable, and seriously advanced.

SportsBeams' patented, closed-loop, fan cooled fixtures solve all of these problems. It uses the same type of exterior-rated fans that have been used in telecom, traffic, and industrial control systems, 24/7, for years and has a 70,000 hour warranty.

CONSTANT TEMPERATURE

Our intelligent active cooling maintains consistent temperature for the LEDs and circuit board.

OVER 490,000 HOURS MTBF

Our fans have been on the market for decades and have a proven MTBF rate of over 490,000 hours.

OVER 40% WEIGHT REDUCTION

No big hunk of metal weighing our fixture down. That means little modification to existing structures.

WIDER OPERATING RANGE

Active cooling allows our fixture to operate in a wider range of environments, from extreme heat to bone-chilling cold.

AIM IN ANY DIRECTION

A passive heatsink must be aimed a specific direction for airflow. Our lights operate in any direction for maximum versatility.

MONITORING INTELLIGENCE

Our built-in intelligent system monitors and logs fan speed, operating temperature and much more.

HOW IT WORKS

- AMBIENT AIR IS DRAWN IN

The fan in the rear is intelligently controlled to pull ambient air in at a rate that maintains consistent temperature. If it's colder outside, it spins slower. If it is warmer, it moves faster.

- FINS DRAW OUT HEAT

Heat from the light and drivers flow to the fins. Air drawn in from the fan carries it out of the fixture.

- CONTINUOUS COOLING

And on it goes. Sometimes air is flowing fast and sometimes slow. But all the sensitive components are kept an optimal 100° C.

SAFER, TOUGHER DRIVERS

An arc welder to power LEDs?

Most sports lighting companies have their drivers at the base of the light poles. This means they need 700V+ of DC power to reach a fixture from the bottom of its pole — That's the equivalent of an arc welder. Worse, since most remote drivers power three or more fixtures, a failure can mean an instant loss of multiple heads.

So why the need to gamble with such dangerously high levels of voltage? Because their fixtures are too heavy to have their driver next to the lights. That and they rely on third-party manufacturers for their drivers. Sportsbeams designs, engineers and helps manufacture our own drivers.

Our patented technology means our lights are much lighter than our competitors'. That allows us to have our drivers at the base of our fixtures, making it much safer to handle at just 48V of DC power. This also dramatically increases the lifespan of the LEDs.

Just one more reason why our fixtures truly are the best in the world!

OUR DRIVER FEATURES

- Custom aluminum die cast housing with precisely engineered heat fins reduces heat by over 20% than standard housings.
- Housing sealed with an IP-67 gasket that ensures protection from water ingress.
- Board is potted in heat-conducting resin that further protects from water and heat damage.
- Stainless steel, water-tight glands allow power and data cables in and nothing else.
- All power supplies ready to be included in our exclusive Redundant Array of Independent Drivers (R.A.I.D.) system.

OTHER SPORTS LIGHTING COMPANIES

VS

SPORTSBEAMS

***700v DC** is equivalent of an arc welder

Sportsbeams fixtures are lighter, allowing our drivers to be positioned at the base of the fixtures. This is why our fixtures only need around 48v of DC power, **making it much safer to handle**

R.A.I.D. SYSTEM

Sportsbeams' patent-pending Redundant Array of Independent Drivers (R.A.I.D.) System is an industry-changing approach to ensure that our fixtures last for years.

To ensure industry-leading performance and reliability, we're pushing our drivers to be better than anything else available in the industry. Our new, patent-pending R.A.I.D. System is an industry-changing approach to ensure that our fixtures last for years.

Our R.A.I.D. System uses a smart controller to share power among a group of fixtures in the unlikely event that a driver fails. In the example below, we have three fixtures, four power sources, and a R.A.I.D. controller. The spare power source is dormant until the power to one of the fixtures is lost.

If that happens, the R.A.I.D. controller instantly activates the spare power source. If a second power source fails, the three fixtures share the power of two drivers at a slightly decreased light output but still visibly equal. If the power to a third driver is lost, the fixtures share the last power source and light output is decreased slightly again, but barely visibly noticeable.

NO MORE DEAD ZONES

Asymmetrical Lighting is wrong for sports. Players quickly lose sight of the ball in the dark, because Sports is played in a 3D environment. To combat this, some companies aim a light straight up into the sky and label it as ground-breaking "technology". Not only is this an inefficient method, but it also cannot be dark-sky friendly.

Unless the goal is to only light a 2D surface like roads, symmetrical lighting provides a far better area light. This provides the horizontal foot candles needed, and the vertical foot candles for athletes to see the ball in the air.

Today's facility managers have a number of requirements placed upon them:

1. They must provide great lighting for the athletes
2. Make it comfortable for the fans
3. Make their fields as dark-sky friendly as possible

Only symmetrical lighting can accomplish all three.

SYMMETRICAL LIGHTING

WHAT IS IT?

Symmetrical lighting creates a beam of light where the horizontal and vertical axes are equal.

WHY IT'S THE ONLY CHOICE FOR SPORTS

Unless the goal is to only light a 2D surface, symmetrical lighting provides a far better area light. Not only will it provide the horizontal foot candles needed, it will also provide the vertical foot candles.

ASYMMETRICAL FIXTURES

TO ADDRESS THIS WEAKNESS, SOME MANUFACTURERS ADD ADDITIONAL FIXTURES AND AIM THEM TOWARDS THE SKY

SYMMETRICAL FIXTURES

SAY GOOD-BYE TO PLASTIC

Plastic fails.

This is why all of Sportsbeams lights are housed in full die-cast aluminum, and have no plastic in them. By completely eliminating plastic from not only the light path, but even in the housing, we've ensured that our light fixtures will truly last in all weather conditions, for years to come.

Sportsbeams is the only company in the entire industry that does this. Our lights are rugged, and are built to withstand harsh wind, sun, and rain.

NO PLASTIC IN HOUSING

All our lights are in custom aluminum die-cast housing that are built to last.

NO PLASTIC IN DRIVERS

Our drivers are also encased in custom aluminum die-cast housing with precisely engineered heat fins.

NO PLASTIC TIR LENSES

We don't cover our LEDs in individual plastic lenses.

NO PLASTIC IN LIGHT PATH

Our LEDs are always single-optic LED with tempered glass lens and use **zero** plastic lenses.

TYPICAL FIXTURE DESIGN

CHALLENGES

1. Lenses must be perfectly attached to the light engine to ensure that moisture or other debris is not trapped underneath
2. The number of LEDs a fixture can hold is limited because of space requirements for the individual lenses

COVERED IN INDIVIDUAL PLASTIC LENSES

SPORTSBEAMS FIXTURE DESIGN

BARE LEDS BUNCHED CLOSELY TOGETHER

POWERFUL WHITE + FULL RGB COLOR

High powered broadcast-quality sports white light
+
Millions of spectacularly saturated premixed color light
all in ONE single-optic LED fixture.

Armed with patented technologies, our Chromabeams are the only fixtures in the entire industry that can do both full high-powered tunable sports white and the full spectrum of saturated RGB lights in one fixture. Not only that, but we are also the only ones that do not use any plastic in the light path or even in the housing.

Although some may claim that their lights are RGBW capable, the colors are dull, and the white light of those fixtures isn't bright enough to light the field, let alone a sports game. This is why they always need additional lights.

But not us. You can light the entire stadium with just Chromabeams.

CHROMABEAMS LED 900

SPORTSBEAMS

OUR PRODUCTS

FEATURES IN ALL OUR LIGHTS

- Single Optics Lens
- Integrated Intellibeam Control System
- Patented Cooling Technology
- 48V DC to LED
- 70 to 95 CRI
- Up to 25 Year Warranty

COURT LED 350

- 46,000+ Lumens
- 320W input / 48 DC to LED
- Color range of 1600K to 6300K
- CRI up to 93

CHROMABEAMS LED 350

- 46,000+ Lumens
- 320W input / 48 DC to LED
- Tunable Color from 1800K to 10000K
- Full RGB
- DMX Controllable

FIELD LED 600

- 85,000+ Lumens
- 830W input / 48 DC to LED
- Color range of 1600K to 6300K
- CRI up to 93

ARENA LED 600

- 75,000+ Lumens
- 600W input / 48 DC to LED
- Color range of 1600K to 6300K
- CRI up to 93

FIELD LED 800

- 85,000+ Lumens
- 830W input / 48 DC to LED
- Color range of 1600K to 6300K
- CRI up to 93

CHROMABEAMS LED 900

- 91,000+ Lumens
- 900W input / 48 DC to LED
- Tunable Color from 1800K to 10000K
- Full RGB
- DMX Controllable

SPORTS

PROFESSIONAL

- With a top-tier portfolio of lighting state-of-the-art stadiums, Sportsbeams is quickly making a name for ourselves in the professional sports industry.
- While there are a few sports lighting fixtures that combine white and colored light, the innovative technology of the Sportsbeams Chromabeams is the most advanced version, sold at a price that allows stadiums to equip every single fixture with this technology for less than the cost of competing, simple and unimpressive white LED fixtures.
- The lighting possibilities for halftime show and sold-out mega concerts are endless, as any experienced stage lighting professional can create an ambitious, one-of-a-kind light show with rapid speed and ease, while matching the exact mood required for the performance on the field.

COLLEGE

- Athletes can see the action with our lights. Our single, glass optic lights every playing surface evenly with smooth, clear light. No other LED sports light on the market can compare.
- Sportsbeams fixtures have the perfect lighting solutions for any collegiate project. From Division I powerhouse arenas to community college intramural fields, we cater to your specific needs no matter the size or scope of the installation.

HIGH SCHOOL

- With competitive pricing on each of our light fixtures, there's no need to settle on an inferior product or brand. Your high school athletes can enjoy a professional level playing experience with our advanced glare and unbelievable visual acuity.
- Whether its football stadiums, basketball courts, softball fields and tennis courts, our diverse range of project experience makes us a leader in the high school sports lighting industry.

APPLICATIONS

RETROFIT

WHY RETROFIT?

- Our fixtures are designed to be a better than 1-for-1 replacement for standard HIDs. Plus, because our fixtures are lighter and have a better wind load than the HIDs they are replacing, we can often add more fixtures on an existing pole.
- Most galvanized steel and cement poles are designed to last for 50+ years. With the right LED fixture, there's no reason to replace the poles.

WHAT WE PROVIDE

- Fixtures w/visors
- New cross arms to mount on existing poles
- New control/power distribution boxes for each pole
- Intellibeams Light Server for wired or wireless DMX-compatible control

AREA LIGHTING

AIRPORTS

- What's good for athletes is good for pilots and ground crew. They need to get work done without getting blinded. Our lights provide incredible illumination without the glare using a patented single lens technology and precise beam control.
- As part of our Intellibeams system, every light that we make comes with advanced intelligence that allows you to control the lights and receive complete status reports. Each fixture has its own MAC address and will be DMX controllable.
- We can match color temperature of high-pressure sodium vapor for fog penetration or raise the color temperature for a more modern look.

PORTS & YARDS

- Safety First: There's no better reason to use our light than for the safety of your crew on the ground. Our lights turn on instantly and provide better light than any other light on the market.
- Night After Night for Years: Gone are the bad old days of continuing electro-mechanical failures. LED is here to change that. Sportsbeams is here to improve significantly on regular LED. Our products are built stronger, last longer and provide a much better glare-free light.
- Rugged Like No Other: Life at the port is not easy. Strong winds, salty mist, electrical surges and more. Each of our products is lab tested and proven to be able to handle the harsh environment at any port.
